

CS-PFR-15-2 Concrete Mattress – Remove and Reuse

Augean North Sea Services (ANSS) have successfully completed a large work scope in the first “Piece Small” decommissioning project to take place in North East Scotland. Working with NorSea on behalf of Endeavour Energy, more than 1000 tonnes of concrete mattresses and related subsea equipment from the Renee / Rubie fields were received into ANSS’ Blackdog centre North of Aberdeen.

The mattresses were then cleaned by High Pressure Water Jetting to remove silt and before shipment to Augean’s Port Clarence facility.

It was essential to the project that as many of these mattresses as possible could be recycled. Working in tandem with Augean’s Energy and Construction division, ANSS have provided reuse options for 100% of the mattresses received and are using the lessons learned to identify improved working practices and novel reuse options for future mattresses returned to shore.

ANSS are grateful to Peterson and JK Cranes for the assistance they provided with the onshore logistics aspects. By working closely together, we will be able to provide improved value both for the customer and the Circular Economy ambitions of the Government.

Augean North Sea Services was founded in 2012 as a joint venture between Scomi Oil Tools by Augean PLC. ANSS operate across several service lines to provide Complete Waste Services to the industry:

- Marine Quayside Services
- Slop water treatment
- Industrial Services on and offshore, deep tank cleans with Specialist water jetting,
- NORM Decontamination & Disposal,
- Production and Decommissioning Waste Management
- Drilling Waste Management
