

PERFORMANCE REPORT

CS-PFR-14-3 NORM Management & Decontamination

Perenco award NORM Management contract to Augean North Sea Services (ANSS).

This award was a defined scope contract for Perenco's M-Site Separator at Wytch Farm, Dorset,-

- ANSS to be responsible for the controlled access to separator.
- Undertake the decontamination & cleaning scope along with the removal of the internal parts in preparation for an upgrade.
- ANSS to utilise their internal provision for the treatment and disposal of the NORM wastes.
- Complete the project safely, compliantly, within budget and the time allocated.

The challenges were significant as the separator had not been opened for over 10 years & the internal conditions were unknown. The proactive approach adopted by the ANSS team allowed for a wide range of potential conditions & requirements to be overcome.

The ANSS crew safely and successfully removed contaminated sands and 130 separate internal components during continuous day and night operations.

Due to the space constraints and the challenges of concurrent operations, ANSS contained all the contaminated material in Vacuum rated skips, which allowed for the safe transportation of the materials to the Augean permitted facility at Port Clarence, where the material was repackaged for final disposal at the Augean permitted EMNRF facility.

The ANSS crew worked very well with the Perenco team and together achieved a successful, early completion of the work. The upgrade works and coalesce package replacement undertaken during the shutdown has provided Perenco with greatly improved performance.

The ANSS team were especially commended on their approach and attitude to safety along with the very high standards of housekeeping that were maintained throughout.

ANSS can be very proud of their specialist services team's achievements.
